

India-Japan seminar, Oct 30, 2010

Organized by Deptt. of Biochemistry, MDU, rohtak

The Deptt. of Biochemistry, M D University, Rohtak, is going to organize one-day India-Japan seminar on “Nanomaterials for therapeutics and diagnosis” on Oct. 30, 2010 in DDE Hall from 10 A.M. to 5 P.M. The first speaker, Prof. Hisatoshi Kobayashi, Head, Biomaterials Center, National Institute for Materials Science, Tsukuba, Japan is one of the eminent scientists of Japan. He is going to deliver his talk on the topic “Challenges to develop highly fictionalized reliable medical materials/devices from Nanofiber to 3D-structure” in the seminar. Second speaker will be Prof. Ashutosh Tiwari, Editor-in-chief, Advanced Material Letters and Biomedical Materials and Devices and Prof., Biomaterials Center, National Institute for Materials Science, Tsukuba, Japan. He will present his talk on the topic “Advanced nanomaterials for Sensor Technology”. Prof. Avinash C. Pandey from Univ. of Allahabad, India, who is one of the leading scientists in the field of nanotechnology is also going to deliver a lecture on the topic “Tailoring the properties of nanomaterials for biological diverse application” in the seminar. Prof. C.S. Pundir, Head, Deptt. of Biochemistry, M.D. University, Rohtak, India and Prof. Ashutosh Tiwari from Japan are the organizing secretaries of the seminar. About 200 young scientists, research scholars and students are expected to attend this seminar. The aim of the seminar is to learn and discuss various aspects of nanomaterials and their use in diagnosis and treatment of different diseases. It is also aimed to provide a platform where scientists from India and Japan could interact with each other in person and plan for collaborative research in future. Highlight of the seminar would be lecture by Prof. Hisatoshi Kobayashi who has 120 plus publications during past 10 years, 60 patents, 11 review articles and books. Registration for the seminar will be on the spot.
