UNIT-I

Introduction to New Machining Technologies : Micro electromechanical Systems (MEMS),Non Conventional Machining Process, Comparison of conventional machining processes and new technologies.

UNIT-II

Micro-electro-mechanical System Description, System Process, Micro Electromechanical systems paradigms, Materials for MEMS, Future trends: Mechanical Transducers, OpticalTransducers,andMultiDisciplinaryApplications.
.

UNIT-III

Ultrasonic machining, Whirling jet machining, fundamental principles, process parameters characteristics, tool design, metal removal rate analysis, important part design,analysis of process. Machining Accuracy and Surface Finish Optimization.

ElectroChemical Machining-Introduction,principles,scheme, process parameters, metal removal rate, Electrochemical grinding: Introduction,tools,process parameters, metal removalrate,Honing,Accuracy and Surface finish Optimization.

UNIT-IV

EDM- Introduction – basic principles, metal removal rate, machining accuracy and surfacefinishoptimization,selectionof toolmaterialanddielectric,analysisofprocess. Wire electric discharge machining: Principle, Process variables.

UNIT-I

Introduction : Introduction ,Review of vectors & Matrices ,Basics of geometric and solid modeling, explicit, implicit, intrinsic and parametric equations, coordinate systems. Transformations : Introduction , Transformation of points & lines,2-D Translation , Shearing,Rotation,Reflection,Scaling & Combined Transformation, Homogeneous Co-ordinates,3-D Scaling,Shearing,Rotation , Reflection & Translation, Combined Transformation, orthographic, axonometric,oblique & perspective projections.

UNIT–II

Curves & Surfaces Geometry and topology ,Algebraic & geometric forms of straight lines, circle, Bezier curves & B–splines curves ,blending functions ,Re parametrization, plane surfaces, sixteen point forms ,four curves form, ruled surfaces of revolution, Tabulatedcylinder,loftedsurfaces,bi-cubicsurfaces,beziersurfaces,B-splinessurfaces,
Coons patch.

UNIT–III

Introduction to CAM: Computer Hardware & Software , APT Language, Introduction to NC,CNC&DNC Systems, Machine axis and coordinate systems. CNC tooling Machine Tools. Automatic tool changers. Open loop and closed loop systems. Adaptive control encoders.

UNIT-IV

Manual part programming, CNC part programming, canned cycles, G-codes& M-codes. High language programming: Flexible manufacturing systems, Computer aided process planning, and Automated Material handling.

UNIT-I

Fuel air Cycles analysis, Thermodynamics of combustion, Chemical equilibrium, Dissociation, Combustion Charts and gas tables for air fuel mixtures and the products of Combustion. Types of Hydrocarbons in Petroleum fuels, Gasoline grades, required properties of SI and CI engine fuels. Rating of fuels.

UNIT-II

Definition of combustion, combustion modes and flame types, review of property relation, Law of thermodynamics, reactant and product mixtures adiabatic flame temperature, chemical equilibrium and product of combustion. Laminar premixed flame, definition principle characteristics, factors, Influencing flame velocity and thickness, flammability limit sand quenching of laminar flow, ignition, turbulent flames : turbulent flame propagation, flame stabilization

UNIT-III

Burning of carbon, coal combustion, effect of pollutant emissions from premixed combustion and from non-premixed combustion. Detonation, principle,characteristics one-dimensional,detonation velocity,structure of detonation waves.

UNIT-IV

Pollution : Exhaust gases and analysis, orset apparatus , infrared analyzer, determination of air fuel ratios, air pollution and engines.

TextBooks:
1. I.C engineVol.1&2byTaylor
2. Thermodynamics and Gas Dynamics of IC engines,Vol1&2byHorlockand Winterbone.

UNITI

Introduction to Machine Tools and Mechanisms :General principles of machine tool design, working and auxiliary motions ,machine tool drives hydraulic and mechanical transmission and its elements ,general requirements of machine tool design, layout of machine tools. Regulation of Speed and Feed Rates: Purpose, stepped regulation of speed-design of speed box ,machine tool drives using multiple speed motors ,developing the gearing diagram, step-less regulation of speed and feed rates.

UNIT-II

Machine Tool Structure: Functions and requirements, design criteria ,materials used and their properties, static and dynamic stiffness ,cross-sectional shapes used for machine tool structures and basic design procedure for the design of beds ,columns and other structural elements, model techniques used in design, introduction to Finite Element Method (FEM).

UNIT-III

Guide ways and Power Screws: Function and types , design considerations & procedure for slide ways, design of power screws.

UNI-IV

Spindles and Spindle Supports: Functions and requirements, materials, effect of machine tool compliance on machining accuracy ,design of spindles, bearings design/selection. Control Systems :Functions ,requirements and classification, control systems for speeds, feeds & auxiliary motions ,manual control systems, automatic control systems ,adaptive control systems,criteria and economics election of machine tools, future trends in development of machine tools.

UNIT-I

Introduction to industrial engineering and productivity, measurement of productivity, Introduction to work study, methods study principles and motion economy, Filming Techniques and micro-motion analysis,Introduction to work measurement.Time study, performance allowances,works ampling,

UNIT-II

Introduction of Ergonomics, system approach to ergonomic model, .Area of study covered under ergonomics , man/machine systems, characteristics of man machine system,limitationofman&machinewithrespecttoeachother.Designapproach:Work Design consideration,General principles for carrying out the physical activities,Design of workplace,machine at workplace,seat for workplace.

UNIT-III

Controls: Criteria for control design, Hand controls and foot controls, Relationship between controls and display instruments, Controls for high precision work (Push Buttons, switches, knobs etc.),Layout of panels and machine
Displays:-Types of displays, Design recommendation for quantitative displays.

UNIT-IV

Climates:-Heat Humidity-Fundamentals of human thermal regulation, measuring the thermal environment, work in hot climate, work in cold climate protection against climatic   extremes,   effect   to   climate   on
performance.
Noise:- Terminology, physiological effects of noise, annoyance of noise, speed interference,hearing loss,temporary and permanent threashold shift, effect of noise on performance reduction of noise, personal noise protection.

UNIT-1   Introduction

History of CFD: Comparison of the three basic approaches in engineering problems solving analytical .Experimental and computational methods. Beam advance in computational techniques.

UNIT-II

Problem formulation

The standard procedure for formulating a problem physical and mathematical classification of problems, types of governing differential equations.

Method s of Discretisation:

Basic of finite difference method: Finite element method. Finite volume method and spectral method. Treatment of boundary conditions.

UNIT-III

Numerical solution of Heat conduction problems:

Steady-state problems: (i) One dimensional heat conduction transfer through a pin-fin- din, two dimensional conduction through a plate unsteady state problem: One dimensional transient at conduction. Explicit and implicit methods. Stability of numerical methods.

UNIT-IV   Numerical solution of fluid flow problems

Types of fluid flow and their governing equation : Viscous incompressible flows calculation of flow field using the stream function-vorticity method: calculation of boundary layer over a flat plate: Numerical algorithm for solving complete Navier-Stokes equation-MAC method SIMPLE algorithm :Project Problem.

Books recommended:

UNIT 1.

Introduction :Basic classification of welding processes, weldability ,weld thermal cycle, metallurgy of fusion welds, solidification mechanism and micro structural products in weld metal ,epitaxial, cellular and dendritic solidification ,metallurgical changes in weld metal, phase transformation during cooling of weld metal in carbon and low alloy steel, prediction of microstructures and properties of weld metal .Heat affected zone ,re-crystallization and grain growth of HAZ gas metal reaction, effects of alloying elements on welding of ferrous metals.

Welding Arc: Arc efficiency ,temperature distribution in the arc; arc forces, arc blow, electrical characteristics of an arc, mechanism of arc initiation and maintenance, role of electrode polarity on arc behaviour and arc stability ,analysis of the arc.

Types of electrodes, AWS and Indian system of classification and coding of covered electrode for mild steel,Shielding gases and associated mixtures

UNIT 2.

Metaltransfer: Short circuit/dip transfer. Free flight .Globular type .Spray type, Forces affecting metal transfer .Weld bead geometry and shape factors, Weld dilution.

Electric arc welding principle, MIG:- welding equipment and processes, shielding gas, types of metal transfer .Tungsten inert gas arc welding(GTAW):-welding equipment ,electrodes ,inert gase sand torches. Submerged arc welding (SAW):-principle of processes, applications ,fluxes and welding electrodes used. CO_2 welding:-difference from MIG welding, Principle of operation ,equipment, welding parameters and applications.

UNIT 3.

Solid state welding: Introduction, main features and applications of Ultrasonic welding, Friction welding, FRICTION STIR WELDING ,FRICTION STIR PROCESSING and Explosive welding.

Welding of plastics   : Difficulties in welding of Plastics, Processes for welding of Plastics.

Surfacing and metal spraying: Surfacing methods such as SMAW, MIG, TIG, SAW. Thermal spraying: Introduction, Procedures, Applications,Advantages and Disadvantages.

Underwater Welding : Introduction, methods and applications.
UNIT4.

Automation in Welding : Introduction ,Semiautomatic welding, Automatic welding, Welding mechanization ,Flexible Automated Welding, Robotic welding, Types of Welding Robots, Selection Mechanics, Joint tracking system.

4   0   0   4   THEORY :100 Marks
TOTAL :150 Marks
DURATION OF EXAM.:3 Hrs.

UNIT-I
Tools Materials and their heat treatment, Mechanism and geometry of chip formation, effect of large and smalls hear angles on chip thickness and length of shear planes study of cutting forces, friction forces ,means hear strength coefficient tof for cutting, method of calculating the metal remove rate. Influence of rake angle side cutting edge & nose radius on cutting forces. Relationship between temperature and hardness of cutting tool materials,Tool geometry of single point and Multipoint Cutting Tool

UNIT-II
Press working terminologies and elements of dies and strip lay out, Press working terminology-Presses   and   press   accessories-Computation ofcapacitiesandtonnagerequirements.Elementsofprogressivecombinationandcompounddies: Dieblockdieshoe.Bolsterplate-punch plate-punch holder-guide pins and bushes–strippers–knockouts-stops–pilots-Selection of standard diesets
Strip layout-strip layout calculations.

UNIT-III
 Design and development of dies, Design and development of progressive and compound dies for Blanking and piercing ,operations .Bending dies–development of bending dies-forming and drawing dies-Development of drawing dies. Design considerations in forging, extrusion,   casting   and   plastic   dies

UNIT-IV
Plastic as a tooling material, commonly used plastic for tooling material, application of epoxy plastic tools ,Construction methods of plastic tooling ,Metal forming operation with Urethane dies. Calculating forces for Urethane pressure pads.
